

Devin Rhode, Frontend Developer

devinrhode2.github.io • (612) 440-5172 • DevinRhode2@gmail.com

Greater Minneapolis-St. Paul Area

JavaScript (ES6) • Ember.js • React • Redux • Browser Extensions • Web Scraping
Node.js • HTML5 • CSS3 • Animation • CSS in JS • Bootstrap & Foundation • Lodash
Git • Github • Jira • Documentation • Grunt • Markdown • Basic Ruby & Python • SQL

Work History

Alliance Laundry Systems (RHT) • Nov 2017 - Oct 2018

Worked on ember-frontend of laundromat management app "Speed Queen Insights", with emphasis on the washer/dryer programming interface re-write. One notable contribution I made was setting up an error dashboard.

EPAM • Apr 2016 - Jun 2016

Built a simple internal app for one of EPAM's larger clients, Google.

Opera • Jun 2015 - Jan 2016

Initially hired to help with toolbar, after which I was kept on to build a browser extension for a consumer app. All UI was contained in a separate ember app, so extension code rarely needs updates. I also helped with the Node.js backend api.

Amobee • Apr 2013 - Aug 2013

Worked with C Engineers on a hybrid native/web 3D ad engine, focusing on web. Developed 3D ads for clients, and made critical improvements to the ad language, resulting in faster development and less code duplication.

Freelance & Startup projects • Since December 2010

I've written 14 chrome extensions receiving 1,000's of downloads, worked on a number of websites, and contributed countless hours to open source,

- **HeyImLea.com**, Built homepage for chatbot, scripted demo with ember+redux.
- **Scout**, personal startup project. Chrome extension that streamlines searching the web. Became very knowledgeable about javascript, css, web performance optimization, framing, and scraping. <https://github.com/devinrhode2/Scout>
- **VoteBox2012.com**, Worked with a designer and a developer to create this website from scratch using jQuery, PHP, Bootstrap, and Facebook Login.
- **HMU**, Built a team and developed this social media app for connecting with friends nearby. Used PHP, MySQL, SVN, Twilio and integrated with Facebook via chrome extension.
- **Snap Speed Computer Care**, Started computer repair service while I was in high school.

"I hired Devin to code a chrome extension that had a Facebook SDK integration component, and some non trivial script injection dependencies. Devin powered through the project in record time, and had a good sense for design and usability while doing the trickier coding parts. He is one of the most talented young coders I've ever met."

— Sergey Lossev, client

"Devin has been a very significant contributor"

— Linda Hass, Opera

"Devin is a very rare type of person. He is the type of student who doesn't look for the grade in a class, but the experience and being able to take something away from it to apply in life."

— Ehsan Angadjivand, classmate

Education

University of Minnesota, Duluth 2010-2011 – Focus: Computer Science, Math
