

Devin Rhode, JavaScript Developer

devinrhode2.github.io • (218) 290-8275 • DevinRhode2@gmail.com

San Francisco Bay Area

JavaScript (ES6) • Ember.js • jQuery • Chrome, Safari, Opera Extensions • Scraping
Framing • Node.js • HTML5 • CSS3 • Animation • LESS, SASS, Stylus • Bootstrap, Foundation
Markdown • Git • Grunt • SQL • Basic Ruby, Python • Documentation • Jira

Work History

JavaScript Developer, Opera • June 2015 - January 2016 (7.5 months)

Worked on 2 teams. First project was a network injected javascript toolbar. Second project is a browser extension for a consumer app. The extension is very simple and only does what extensions can do, it contains no UI and instead communicates with a website front-end built with Ember.js. I also worked on the Node.js backend api, supporting the android and iOS clients.

"I hired Devin to code a chrome extension that had a Facebook SDK integration component, and some non trivial script injection dependencies. Devin powered through the project in record time, and had a good sense for design and usability while doing the trickier coding parts. He is one of the most talented young coders I've ever met."

— Sergey Lossev, client

JavaScript Developer, Amobee • April 2013 - August 2013 (5 months)

Collaborated with C Engineers on a hybrid native/web 3d ad engine. Developed 3d ads for clients, and made critical improvements to the ad language, resulting in faster development and less duplication.

Freelance and Side Projects

I've written twelve chrome extensions that have been downloaded thousands of times.

- **Scout**, personal startup project. Chrome extension that streamlines searching the web. Became very knowledgeable about javascript, css, web performance optimization, framing, and scraping. <https://github.com/devinrhode2/Scout>
- **TrackIf.com**, short-term contract. Designed and implemented initial versions of bookmarklet, Chrome and Safari extensions with code-sharing and live update capabilities.
- **VoteBox2012.com**, short-term contract. Partnered with a designer and a developer to create this website from scratch using jQuery, PHP, Bootstrap, and Facebook Login.
- **HitMeUp**, personal startup project. Built a team and developed this social media application for connecting with friends nearby. Used PHP, MySQL, SVN, Twilio and integrated with Facebook.
- **CribFrog**, short-term contract. Collaborated with the founder of this startup to prototype the first version of a social application for residential tenants using PHP.
- **Refactor**, short-term contract. Developed a chrome extension and bookmarklet to embed the functionality of their MileMarker product into the browser.
- **Snap Speed Computer Care**, small business. Mostly helped more senior folks with their computers while I was in high school.

"Devin has been a very significant contributor"

— Linda Hass, Opera

"Devin is a very rare type of person. He is the type of student who doesn't look for the grade in a class, but the experience and being able to take something away from it to apply in life."

— Ehsan Angadjivand, classmate

Education

University of Minnesota, Duluth 2010-2011 – Focus: Computer Science, Math
