

Devin Rhode, JavaScript Developer

devinrhode2.github.io • (218) 290-8275 • DevinRhode2@gmail.com

San Francisco Bay Area

JavaScript (ES6) • Ember.js • jQuery • Chrome, Safari, Opera Extensions • Scraping
Framing • Node.js • HTML5 • CSS3 • Animation • LESS, SASS • Bootstrap, Foundation
Markdown • Git • Grunt • SQL • Basic Ruby, Python • Documentation • Jira

Work History

JavaScript Developer, Opera • June 2015 - January 2016 (7.5 months)

Worked on 2 teams. First project was a network injected javascript toolbar. Second project is a browser extension for a consumer app. The extension is very simple and only does what extensions can do, it contains no UI and instead communicates with a website front-end built with Ember.js. I also worked on the Node.js backend api, supporting the android and iOS clients.

"I hired Devin to code a chrome extension that had a Facebook SDK integration component, and some non trivial script injection dependencies. Devin powered through the project in record time, and had a good sense for design and usability while doing the trickier coding parts. He is one of the most talented young coders I've ever met."

— Sergey Lossev, client

JavaScript Developer, Amobee • April 2013 - August 2013 (5 months)

Collaborated with C Engineers on a hybrid native/web 3d ad engine. Developed 3d ads for clients, and made critical improvements to the ad language, resulting in faster development and less duplication.

Freelance & Startup projects • Since December 2010

I've written thirteen chrome extensions that have been downloaded thousands of times.

- **Scout**, personal startup project. Chrome extension that streamlines searching the web. Became very knowledgeable about javascript, css, web performance optimization, framing, and scraping. <https://github.com/devinrhode2/Scout>
- **TrackIf.com**, Designed and implemented bookmarklet, Chrome and Safari extensions with code-sharing and live update capabilities.
- **VoteBox2012.com**, worked with a designer and a developer to create this website from scratch using jQuery, PHP, Bootstrap, and Facebook Login.
- **HitMeUp**, Built a team and developed this social media application for connecting with friends nearby. Used PHP, MySQL, SVN, Twilio and integrated with Facebook via chrome extension.
- **Refactr**, Developed a chrome extension and bookmarklet to embed the functionality of their MileMarker product into the browser.
- **CribFrog**, Collaborated with the founder of this startup to prototype the first version of a social application for residential tenants using PHP.
- **Snap Speed Computer Care**, helped people with their computers while I was in high school.

"Devin has been a very significant contributor"

— Linda Hass, Opera

"Devin is a very rare type of person. He is the type of student who doesn't look for the grade in a class, but the experience and being able to take something away from it to apply in life."

— Ehsan Angadjivand,
classmate

Education

University of Minnesota, Duluth 2010-2011 – Focus: Computer Science, Math
